First-year BSc Computer Science (Artificial Intelligence) student at the University of Greenwich with a strong interest in **software testing, quality assurance** and reliable software delivery. I have hands-on experience designing and building Python applications, exposure to unit testing and Bash scripting and have completed a 6-month cyber security course that strengthened my attention to detail when working with systems and web applications. I am keen to develop practical skills in **test design, automation frameworks, defect tracking and agile testing** through the London Success Academy , Software Testing Internship.

Experience

Interned at Airbac Labs, Bengaluru, India

EdTech Company

- Led a team of five to develop a **health insurance price prediction** program in **Python**, applying basic machine learning and data processing.
- Wrote clean, modular code and manually tested features to ensure correctness and robustness.
- Gained experience in **debugging**, validating outputs and improving code quality based on feedback

Created an Outlook-like System using Python

University of Greenwich

- Designed and implemented an **Outlook-like email system** in Python to handle sending, viewing and organising messages.
- Planned the system architecture from scratch, which improved understanding of **test cases, edge cases and program design**.
- Gained exposure to **unit testing** and verifying functionality across different scenarios.

Education

University of Greenwich, London

BSc Computer Science (Artificial Intelligence)

(Current)

Texas International Academy (12th Grade), India – **Passed with 95%**

April 2025

Skills

Technical: Microsoft 365, Copilot, HTML, Python (from simulations), Debugging, Unit Testing

Language: English (Fluent), Hindi (Fluent), Telugu (Native), French (Beginner)
