| <https://www.linkedin.com/in/charvin/> | <https://github.com/charviN>

Second-year BSc Computer Science (Artificial Intelligence) student at the University of Greenwich with practical experience using Microsoft 365 tools and a strong interest in building clear, user-friendly digital systems. I have hands-on experience with Python-based projects, unit testing, debugging and structured problem solving, and I am comfortable learning new platforms quickly. I work well independently, communicate clearly with non-technical users, and am keen to support the design and development of staff-facing SharePoint solutions that improve access to information and documents.

Experience

Interned at Airbac Labs, Bengaluru, India

EdTech Company

- Led a team of five to develop a **health insurance price prediction** program in **Python**, applying basic machine learning and data processing.
- Worked with **Microsoft 365 tools** to support collaboration, document sharing, and efficient team communication during project development.
- Wrote clean, modular code and manually tested features to ensure correctness and robustness.

Volunteer Presenter at Rubaroo Organization, India

Organization

- Designed and delivered **PowerPoint presentations** for government school students on career awareness and future role options.
- Simplified complex information into clear, visually engaging slides that supported student understanding.
- **Communicated confidently** with students and helped create an inclusive and supportive learning environment.
